

Compare Pasture Growth report

FARMAX Professional files can extract all previous year's pasture growth information in one report- the **Compare Pasture Growth** report, see below. This information is extracted from all monitoring files for the duration that they have been uploaded to the Farmax HelpDesk Bureau.

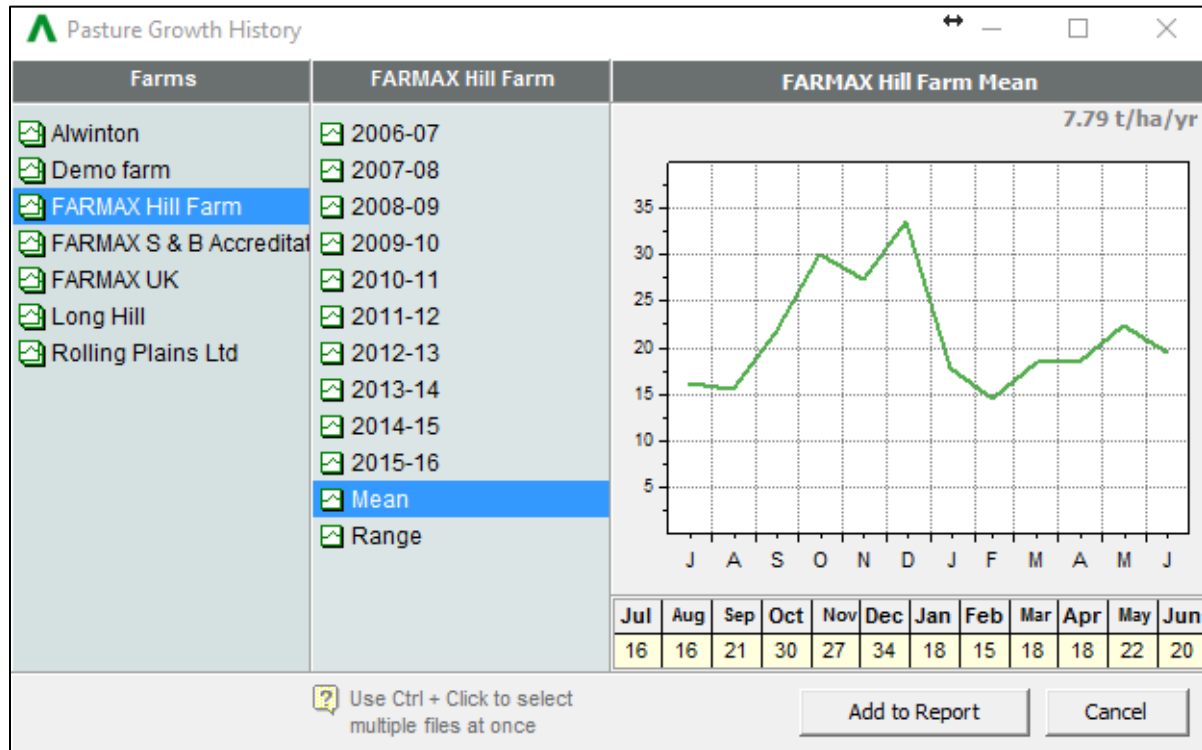

Where can I find it?

Click on Farm level in the tree-view and you will see 'Compare Growth' in the list of reports.

How do I use it?

Click Add...  Add... - a button available above the graph – and select the farm and years you wish to import.

Tip: Hold Ctrl and click the farms will give the ability to open multiple farms at once.

This will populate the graph with the pasture growth data for these years, as above. The Mean could be useful for forecasting and long-term modelling and the range gives an indication of how the variable pasture growth is on the farm.
